

## MAIN FEATURES

- One size: 390mm dia.
- Very low profile - only 14mm thick
- Corrosion proof stainless steel construction
- 100Kg weight limit (UDL)
- High quality conductive lubricated low resistance bearings
- Volume Resistivity Ohms/Square 10<sup>7</sup>-10<sup>9</sup>
- Conforms to BS EN 61340-5-1
- Connected to ground via ESD workbench laminate or mat
- Blue dissipative surface matting—or no matting.
- Lockable in any positions with one of three thumbscrews

When working on heavy or large products or assemblies on the workbench, the need to lift the product is taken away when working on a static safe turntable. 100% safe to use in an EPA anti-static protected area. Ideal for use within the electronic assembly industry, but can also be used in any other industry.

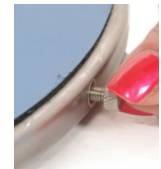

The **GYRO-STAT®** ESD safe turntable designed and manufactured in the UK by VODEX makes working on heavy and awkward assemblies easy! Each lazy-susan turntable can withstand 100Kg (UDL) and will prevent back injuries caused by lifting heavy equipment. One of three manual screw locks prevents spinning in any position if required.

Work-related musculoskeletal disorders (MSDs), including manual handling injuries, are the most common type of occupational ill health in the UK and their prevention is a priority for HSC/E.

The Manual Handling Operations Regulations 1992 (as amended) establish a clear hierarchy of measures for dealing with risks from manual handling.

### Technical Specifications

- One size: 390mm diameter
- Very low profile - only 14mm thick
- Corrosion proof stainless steel construction
